

PROTECT YOUR CRITICAL INFORMATION \ \ ON ANY DEVICE \ \ ANYWHERE

BlueTie WebSecurity delivers industry-leading, cloud-based security that protects your employees, enables compliance and lowers your total cost of security. Using a proven Security-as-a-Service (SaaS) deployment model, BlueTie WebSecurity is easy to set-up and administer, enabling you to support a mobile workforce and operate your own “bring-your-own-device” (BYOD) policy.

Benefits of BlueTie WebSecurity

Advanced Protection

\ \ **Antivirus**—*Reduce the risk of malware infection or time-consuming cleanup.* BlueTie WebSecurity is a defensive barrier between users and the Internet, giving immediate protection from viruses and spyware, everywhere they go and however they connect.

\ \ **URL Protection**—*Block connections to phishing and other malicious site, preventing infection and loss of login/credential data.* The system is continuously updated with the most up-to-date information on phishing, advanced persistent threat, and other unsafe sites, blocking any request to these pages.

\ \ **Always Up to Date**—*Ensure your security is always the latest and best.* BlueTie WebSecurity checks all Web traffic against up-to-the-second threat profiles produced by our global threat analysis platform, giving you instant *protection from new threats as they emerge* without any need for time-consuming updates.

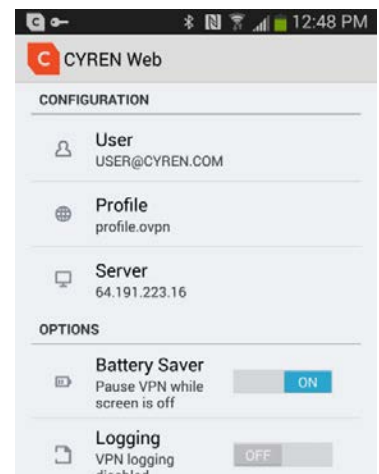

Extend Security to Mobile Users

\ \ **Mobile Device Coverage**—*Add security to smartphones and tablets.* Regardless of location or device ownership, Android and iOS users are protected from Web malware, phishing attacks, and botnet access while conforming to company browsing policy. With processing performed in the cloud, there is no impact on device performance or battery life.

Why You Need Cloud-based Security

- **Internet threats and malware** are increasing.
- **SMBs are being targeted** by cyber criminals.
- **Roaming and remote workers** need to operate safely outside your office network.
- **Gain visibility** of Web use for all devices, everywhere.
- **Multiple devices** such as mobile computing platforms make consistent protection difficult.
- **BYOD** makes it even more difficult to control every device accessing company resources.
- **Multiple sites** make policy and device management time consuming and costly.
- **Keeping up with new threats** requires security solutions to be constantly updated.
- **Cost of ownership** rises with constant hardware and software upgrades to support growth or new devices.

Fight today's Internet threats with today's technology. You can protect users - on all devices at any location - with consistent policies, applied company-wide. Centralized deployment, monitoring, and reporting simplify management.

Control of Security, Compliance and Productivity

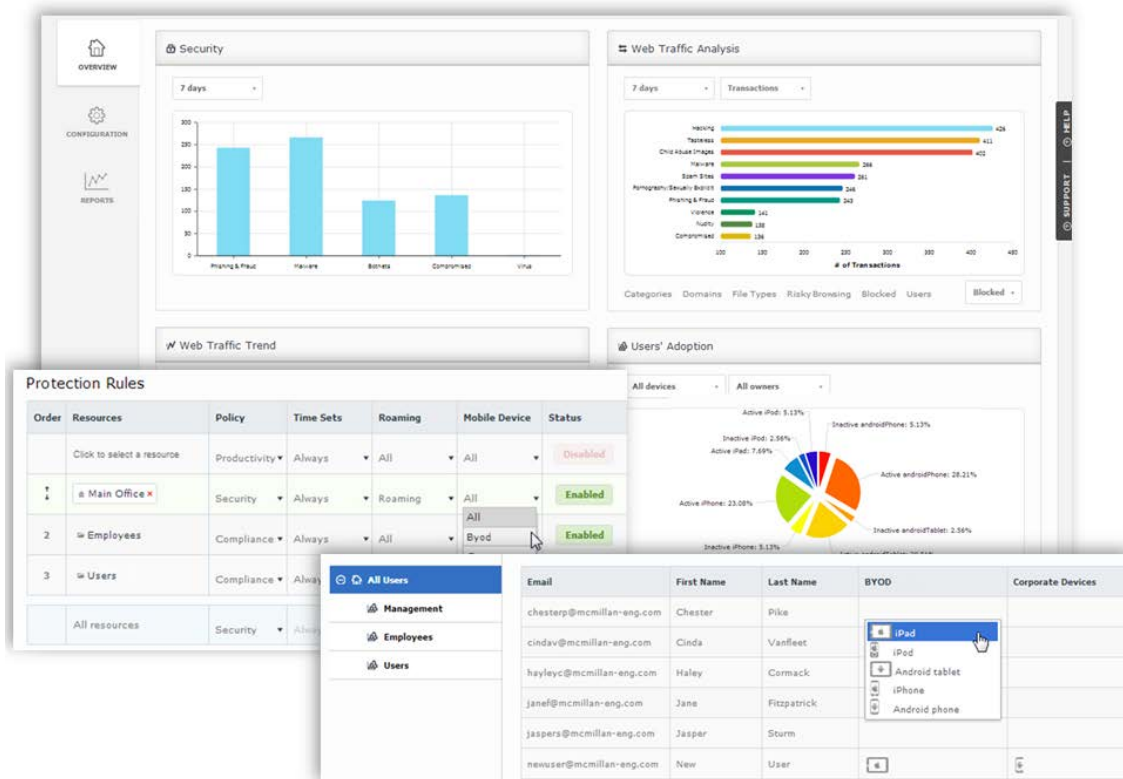

\\ **URL Categorization**—Enforce acceptable use policy, based on user, group, device, location, or time of day. BlueTie WebSecurity provides 64 URL categories as standard, including ones used by security threats such as advanced persistent threats, organized for maximum analysis and control. You can even create your own categories for your own whitelists and blacklists.

Great User Experience

\\ **Local Access and Low Latency**—The BlueTie WebSecurity global platform gives you local access with low latency for a consistently great browsing experience, regardless of device or user location. The system is so fast, your users won't even know it's there.

Simple Management

\\ **Intuitive Interface**—Deployment and configuration are easy with our intuitive interface. With BlueTie WebSecurity, you can create policies specific to your needs and corporate structure, in just a few minutes. Our advanced dashboard gives you instant insight into all current threats and traffic usage.
